

AC003 Foot Switch

Installation

The foot switch is a simple momentary type switch. While pressed, the two wires coming from the switch are connected together. To install on a Monit G-Series+ simply plug into the 3pin connector on the wiring loom.

To install on a Monit Q-Series, one wire of the foot switch should be connected to a Monit Auxiliary Input wire (see users manual) and the other wire of the switch should be connected back to the Monit Ground (0v-, Black wire).

During installation, note that:

- The polarity of the two switch wires does not matter.
- The foot switch will not work until it has been configured in software. See Monit Operation and Installation manual - Auxiliary Inputs
